

## Dewpoint transmitter to -90 °C td

### SPECIFICATIONS

testo 6781

The transmitter testo 6781 was developed specially for trace humidity measurement in compressed air and in dry air (e. g. in granulate dryers). The international norm ISO 8573 categorizes seven classes of compressed air. High-performance adsorption dryers are required in order to meet the highest quality classes 1 and 2. They can be monitored by the testo 6781 down to very low dewpoints of  $-90\text{ °C}_{td}$ .

The newly developed sensor with sol-gel technology is characterized by its condensation-proofness and fast response time, thus guaranteeing highest process security.

Areas of application:

- Dewpoint measurement in compressed air in ISO Classes 1 ( $<-70\text{ °C}_{td}$ ) and 2 ( $<-40\text{ °C}_{td}$ )
- Monitoring of adsorption dryers, granulate dryers and medical compressed air
- Quality assurance for noble gas preparation

### SPECIFICATIONS

testo 6781

- Measurement of dewpoints in the measuring range  $-90$  to  $+30\text{ °C}_{td}$ , with main applications under  $-40\text{ °C}_{td}$
- New, very condensation-proof sensor with sol-gel technology guarantees highest process security and fast response
- Automatic self-adjustment ensures high accuracy and long reliability
- Optional display with multi-language user menu
- Self-monitoring of the transmitter guarantees high system availability
- The P2A software for parameterization, adjustment and analysis saves time and costs in commissioning and maintenance

\* Determination measurement inaccuracy according to GUM  
GUM (Guide to the Expression of Uncertainty in Measurement): ISO guideline for the determination of measurement inaccuracy, in order to make measurements comparable worldwide. The following inaccuracies are used for the determination:

- Hysteresis
- Linearity
- Reproducibility
- Adjustment site/factory calibration
- Test site

This total view results in an additional dewpoint-dependent and process-dependent inaccuracy contribution of ±0.03 K x measurement value (in °Ctd) + 0.2 K x (25 °C - process temperature in °C).

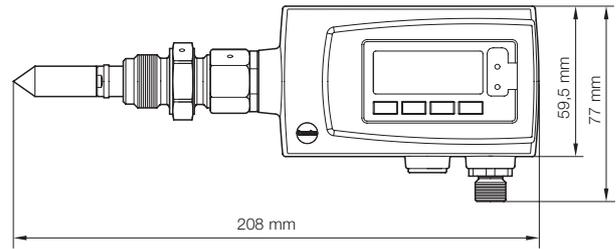

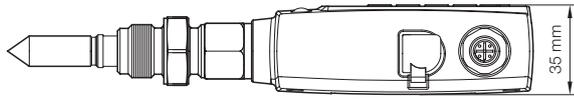

Outside the stated measuring range, a measurement inaccuracy of ±5 K applies (typical, max. ±10 K).

Inputs/outputs
